

Fitting the Directional line

· This feature is optional

Learning to navigate under magnification is enhanced when a direction line is added to the lens. The lens direction line is best placed according to your preferred navigating position, A or B.

Fitting the direction line:

Step 1

Choose option A or B for your preferred navigating locating position.

- A. The lens will sit directly over the Str8 compass navigating tip
- B. The lens will sit midpoint along the Str8 compass main pointing line

Step 2

Insert the locating pin (included) in the A or B hole and press down until secure. To remove, turn compass over and using a small pin, push locating pin until the head is released.

Step 3

With the lens in position (A or B) carefully attach the lens sticker (included) to the edge of the lens parallel to the Str8 compass pointing lines.

Step 4

Rotate the lens 180 degrees to place in resting position.

Looking after your Magnifier

Every endeavour has been made to present your new Str8 magnifier in great condition.

Maintenance considerations:

- Clean with a non-scratch microfiber wipe.
- Store away from direct sunlight

Support & Warranty & Crash Replacement
